
(a)
2000 wires, 5953 junctions
(yellow: 32 probes)
V_{in} electrode
GND electrode
y (µm)
x (µm)
(b)
quasi-static I/V
(3000 steps/level)
conductance I/V (mS)
increasing V
decreasing V
electrode voltage V (V)
(c)
step response
($1/p_{relax}$ = 10 s)
ON fraction of junctions
V_{in} (V)
time t (s)
(d)
reservoir drive: i.i.d. input, hold = 30 steps (30 ms), window 1.25-2.25 V; open circles: end-of-block samples
V_{in} (V)
total current I (mA)
time since end of washout (s)
